

## Geography – 2011 Census Index File Specification

The 2011 Census Index contains 2 index tables and various lookups that accompany these tables.

- 2011 Postcode to Output Area(OA) Index (Table Name: POSTCODE\_TO\_OA)  
This index, or table, simply indicates to which area a postcode belongs. It can be particularly helpful to users who may wish to compare other postcode-based data with Census results.
- 2011 Output Area to Higher Area Index (Table Name: OA\_TO\_HIGHER\_AREAS)  
This index, or table, provides a link between the Output Area and the 'higher' area that the Output Area belongs to. This enables users to aggregate some output on an Output Areas base to a 'higher' area, such as council area, or Civil Parish.

Users are reminded that the higher areas created from the allocation of Output Area may differ from the equivalent higher areas created by allocating postcodes using the 2011 Postcode Index, with the result that some addresses may appear in different higher areas. More information on best-fit and exact-fit can be found in the geography [Policy](#) section of the National Records of Scotland (NRS) website.

- Various lookups are provided to accompany these index tables  
The lookup tables provide codes and names for each of the 'higher' areas listed in the 2011 Output Area to Higher Area Index. Note that 6 fields (OutputArea2011Code, MasterPostcode, Easting, Northing, Hectarage and SquareKilometres) within this Index don't have a look-up table.
