

Table 6.13 Deaths aged under 90¹, years of 'working life'² lost and years of 'life to age 90'³ lost due to mortality from selected causes, per 10,000 population, Scotland, 2007

ICD Codes	Cause of death		Deaths aged under 90		Mean age at death ⁴ (if died under 90)	Years of life lost			
			Number	Rate per 10,000 population (all ages) ⁵		Working life (age 15-64)		Life to age 90	
						Years lost (thousands)	Years lost per 10,000 population (all ages) ⁵	Years lost (thousands)	Years lost per 10,000 population (all ages) ⁵
All causes		All	48,488	94	72	168	327	886	1,722
		Males	24,964	100	70	108	436	512	2,059
		Females	23,524	88	74	60	224	374	1,406

		F	131	0	45	3	10	6	22

¹ The figures in this table relate only to people who died before their 90th birthdays. Almost all of the figures are on the same basis as in previous years, although previous years' table headings did not state clearly that they related only to deaths aged under 90. However, in previous years' tables, the "all causes" figures for the number of deaths (and the associated rate per 10,000 population) covered all ages - that is not the case in this table. Some other errors in the headings have also been corrected for this table.

² defined as: 50 for deaths aged under 15; (65-mid-point of relevant age-group) for deaths aged 15-64; and 0 for deaths aged 65 and over. For example, someone dying at 38 would be counted as losing 28 years of working life, because 37 is the mid-point of the 35-39 age-group and subtracting 37 from 65 gives 28.

³ defined as: (90-mid-point of relevant age-group) for deaths aged 0-89; and 0 for deaths aged 90 and over. For example, someone dying at 38 would be counted as losing 53 years of life, because 37 is the mid-point of the 35-39 age group and subtracting 37 from 90 gives 53.

⁴ this is calculated using the actual age (in whole years) at death, not using the mid-point of the relevant age-group

⁵ the population of all ages (including people aged 90 and over) is used as the denominator for the rate
