**Notes**

Death registration records which could not be matched to a census record are counted on the 'no matching census record' row.

These figures were produced by adding up the numbers that appear in Table 1, with values shown there as '.' counted as '0'. Therefore, some figures are slightly too small, because they do not include any contribution from values of 1, 2 or 3 that were shown as '.' in Table 1. The 'number not counted' row and column indicate the scale of the resulting under-counting.
